

Table of Contents

Plenary lecture

PL1-01	Rafal E. Dunin-Borkowski	Recent Progress in Electromagnetic Field Mapping at the Nanoscale	S01
PL1-02	Sumio Iizima	Careful observation is the first thing to do in science	S02
PL1-03	Toshio Yanagida ¹	Single molecule imaging expanded to macroscopic level by computer simulation	S03

Oral session

O3-01	Hiroshi Jinnai	Three-dimensional microscopy for multi-scale imaging: from nano to macro	S04
O3-02	Hiroyuki Toda	3D/4D analyses of damage and fracture behaviours in structural materials	S05
O3-03	Yoshitaka Adachi	High dimensional data driven statistical mechanics	S06
O3-04	Toru Hara	Recent improvement of a FIB-SEM serial-sectioning method for precise 3D image reconstruction. –Application of the orthogonally-arranged FIB-SEM–	S07
O3-05	Jun Yamasaki	Nonlinear intensity attenuation with increasing thickness and quantitative TEM tomography of micron-sized materials	S08
O3-06	Tadakatsu Ohkubo	Multi-scale characterization by FIB-SEM/TEM/3DAP	S09
O4-01	Tomomi Nemoto	Development of novel two-photon microscopy for living brain and neuron	S10
O4-02	Kei Ito	Whole-brain neural network analysis (connectomics) using cell lineage-based neuron-labeling method	S11
O4-03	Takahiro Sonomura	Attempt of correlative observation of morphological synaptic connectivity by combining confocal laser-scanning microscope and FIB-SEM for immunohistochemical staining technique	S12
O4-04	Yoshinobu Mineyuki	3D image analysis of plants using electron tomography and micro-CT	S13
O4-05	Chikara Sato	3D structure determination of protein using TEM single particle analysis	S14
O5-01	Toshiharu Saiki	Near-infrared nano-imaging spectroscopy using a phase change mask method	S15
O5-02	Takashi Ichii	High-resolution Structural Analysis on Ionic-Liquid/Solid Interfaces by Frequency Modulation Atomic Force Microscopy	S16
O5-03	Yasuhiro Sugawara	Spin-selective Imaging by Magnetic Exchange Force Microscopy Using Ferromagnetic Resonance	S17
O5-04	Masahiko Tomitori	Microscopic techniques bridging between nanoscale and microscale with an atomically sharpened tip-field ion microscopy/ scanning probe microscopy/ scanning electron microscopy	S18
O5-05	Ishida, Nobuyuki	SPM characterization of next generation solar cells under light irradiation: Optoelectronic study from nano to macroscopic scale	S19
O5-06	Hiroshi Itoh	SPM system for semiconductor device applications	S20
O6-01	Kouichi Hayashi	Atomic resolution holography	S21
O6-02	Motohiro Suzuki	Hard-X-ray Magnetic Microscopy and Local Magnetization Analysis Using Synchrotron Radiation	S22
O6-03	Akira Saito	X-ray STM: Nanoscale elemental analysis & Observation of atomic track	S23
O6-04	Hiroyuki Kudo	Introduction to Advanced Image Reconstruction Methods and Compressed Sensing in Medical Computed Tomography	S24
O6-05	Yoshimasa Kawata	High Resolution Fluorescent Bio-Imaging with Electron Beam Excitation	S25

Poster session

P-01	Akihito Kumamoto	Dislocation imaging for orthopyroxene using an atom-resolved scanning transmission electron microscopy	S26
P-02	Takehito Seki	Direct Observations of Local Electronic States in an Al-based Quasicrystal by STEM-EELS	S27
P-03	Naoyuki Nakahigashi	High energy-resolution electron energy-loss spectroscopy study of the dielectric properties of multi-shell nanoparticles	S28
P-04	Yohei Sato	Optical properties of Group X-XII intermetallic compounds studied by HR-EELS	S29
P-05	Akinori Uehashi	Formation of secondary phase at grain boundary of flash-sintered BaTiO ₃	S30

P-06	Kazuki Ohashi	Surface precipitates formed on annealed LSAT (001) single crystal	S31
P-07	Akihito Ishihara	Observations of crack propagation along a Zr-doped alumina grain boundary	S32
P-08	Tadashi Matsushita	A Structural Study of Solid Electrolyte Interface On Negative Electrode of Lithium-Ion Battery by Electron Microscopy	S33
P-09	Takeshi Nagase	Irradiation damage in multicomponent equimolar alloys and high entropy alloys (HEAs)	S34
P-10	Yoichi Horibe	Observation of vortex domain structures in multiferroic hexagonal manganites RMnO ₃ by transmission electron microscopy	S35
P-11	Takahiro Karumi	Observation of the potential distribution in GaN-based devices by a scanning electron microscope	S36
P-12	Takashi Endo	Three-Dimensional Characterization of ODS ferritic steel using by FIB-SEM serial sectioning method	S37
P-13	Sachihiko Tomonaga	A new field-of-view autotracking method based on back-projected ray image cross-correlation for online tomography reconstruction	S38
P-14	Akira Miyake	Sample preparation toward seamless 3D imaging technique from micrometer to nanometer scale	S39
P-15	Ryuji Nishi	Fast auto-acquisition tomography tilt series by using HD video camera in ultra-high voltage electron microscope	S40
P-16	Masahiro Ishida	Multi-scale 3D characterization of long period stacking ordered structure in Mg-Zn-Gd cast alloys	S41
P-17	Takeshi Nishiyama	Three-dimensional characterization of BaHfO ₃ precipitates in GdBa ₂ Cu ₃ O _{7-y} film using STEM tomography.	S42
P-18	Takashi Gondo	3D visualization of TiO ₂ nanocrystals in mesoporous nanocomposite using energy filtered transmission electron microscopy tomography	S43
P-19	Kazuhiro Yamada	Microstructural characterization of GdBa ₂ Cu ₃ O _{7-δ} superconductor films with BaHfO ₃ artificial pinning centers by scanning transmission electron microscopy	S44
P-20	Shuhei Kobayashi	High-temperature in-situ TEM straining of the interaction with dislocations and particles for Cu-added ferritic stainless steel	S45
P-21	Hirohiko Niioaka	Correlative cathodoluminescence and near-infrared fluorescence imaging for bridging from nanometer to millimeter scale bioimaging	S46
P-22	Keiko Onishi	High Aspect Ratio AFM Probe Processing by Helium-Ion-Beam Induced Deposition	S47
P-23	Kaoru Mitsuoka	A pKa calculation of residues in a proton pump, bacteriorhodopsin, from structures determined by electron crystallography	S48
P-24	Ayaka Iwasaki	Development of virtual electron microscopy to supply unified user interface	S49
P-25	Misaki Tanaka	Cell observation method under near-living conditions by scanning electron microscopy	S50
P-26	Zhuo Wang	Structural analysis of the 26S proteasome by cryo-electron microscopy and Single-Particle Analysis	S51
P-27	Ryutaro Yamanaka	Metallothionein labeling for CLEM method method for identification of protein subunits	S52
P-28	Takafumi Tsukamoto	Development of a user-friendly system for image processing of electron microscopy by integrating a web browser and PIONE with Eos	S53
P-29	Shinji Aramaki	Revealing the intracellular ultrastructure of filopodia with cryo-electron tomography	S54
P-30	Keisuke Ohta	Three-dimensional organization of the endoplasmic reticulum membrane around the mitochondrial constriction site in mammalian cells revealed by using focused-ion beam tomography	S55
P-31	Akinobu Togo	En bloc staining with hydroquinone treatment for block face imaging	S56
P-32	Satoko Okayama	Correlative light and electron microscopic observation of mitochondrial DNA in mammalian cells by using focused-ion beam scanning electron microscopy	S57
